## THE IPD (INCIDENCE AND PREVALENCE DATABASE)

### THE KEYSTONE OF ANY SUCCESSFUL DECISION MAKING PROCESS

THE IPD (INCIDENCE AND PREVALENCE DATABASE) is a set of data providing reliable and accurate intelligence of the global epidemiological landscape.

#### IN-DEPTH RESEARCH AND ANALYSIS

The data is skilfully researched by a team of trained analyst and coders using an ideal blend of primary & secondary research analysis sourced from public and private data.

#### « ICD » AS UNIQUE NOMENCLATURE

Thanks to the ICD coding, not only will you be able to evaluate the data using international coding standards, but you will also be able to compare data across different countries – without getting lost in translation and by always comparing 'apples with apples'.

#### INTERQUONECTIVITY

With the introduction of our latest tool interQuonectivity®, the Incidence and Prevalence Database can be combined with our other range of Datasets, upgraded and customised thanks to primary research and combined with our consultancy solutions.

Our databases are updated quarterly and can be easily customized to fit customer needs.

#### TRUSTED AS MARKET INTELLIGENCE

To this day, half of the Top 20 medical devices companies have equipped themselves with Quomeda's IPD with the end goal of:

- + Identifying a wide range of pathologies

#### HIGHLY CUSTOMIZABLE

As always, Quomeda strives to tailor its data to any client need:

- + Market potential
- + Patient share
- + Unmet needs
- + Indications and sub-indications
